

SEG Dallas 2003

SEG International Exposition and Seventy-Third Annual Meeting, Dallas, Texas
October 26-31, 2003.

Once again, Badleys will be present at the SEG International Exposition, Dallas. The conference provides an excellent venue to discuss technical issues and to see the latest versions of our software offerings. So if you expect to attend SEG be sure to visit us at **Booth 750 in Hall A**.

This year we will be demonstrating the pre-release interface for our new software module *FaultED*. We've already had a lot of interest in this new tool for the application of elastic dislocation theory to the modelling and prediction of small-scale faults and fractures.

We hope the conference will be an opportunity to meet clients, discuss geological problems and demonstrate software. Please feel free to [contact us](#) and arrange meetings. We look forward to seeing you there!

FaultED - our elastic dislocation tool for modelling and predicting small-scale faults and fractures now has a user interface that is fully integrated within TrapTester.
