

Merry Christmas & Happy New Year

It has been another busy year at North Beck House. This year we released T7.4, a major upgrade to the TrapTester T7 system. The flagship feature was fault seal uncertainty (FSU) which offers geoscientists a practical, geologically consistent way to assess fault-seal risk. T7.4 also introduced improvements to our AI fault detection system as well as many system enhancements. If you would like to discuss these features, we are always happy to oblige! We have some exciting developments in the pipeline for 2026 already, and have been busy developing additional solutions as suggested to us by our client base through the year.

We greatly enjoyed connecting with many of you at this year's conferences, especially the Fault & Top Seals Conference, where we delivered a well-received keynote presentation. While consultancy, training, conferences and client visits took us around the world, our excellent representatives in Indonesia, Malaysia, Egypt, Nigeria and China have continued to support us in their regions. We are very grateful for all they do. We hope that 2026 is a prosperous year for our T7 / structural geo community. Should we be able to assist with any challenges they face, we will endeavour to do so.

Our office will close on December 24th and reopen on January 5th. During this time, we will maintain our high level of technical support. If you have any queries during this period simply email **Support** as usual. We will respond as quickly as possible.

Happy Christmas from all at Badleys. Wishing everyone a happy, healthy, prosperous New Year.
